

After we connect with Netcat, we can see a string with lenght=5 (each time we connect is another string, so we need to follow the stepts) :

1. Enter `https://cyberchef.io`
2. Use Reverse Operation (because we are asked for "Little Endian" first, we worked with ASCII characters and to get the Little Endian representation, we need to reverse the byte order before converting to hex)
3. Use Hex Operation
4. Paste in terminal the hex optained (example : `75636f6164`)
5. Paste in terminal the reversed previous hex optained (for "Big Endian", example : `64616f6375`)

THE FLAG : `picoCTF{3ndi4n_sw4p_su33ess_d58517b6}`
