I filtered the packets by **tcp.port eq 20** because I saw a packet with the destination port **1337,** I copied all the destination ports with the following command :

```
tshark -r flag.pcap -Y "tcp.srcport == 20" -T fields -e tcp.dstport > ports.txt
```

I found out that all the ports assembled creates a hex message (because the first **2 packets** make number **63**, which is C in Hex from **CTF**) and we have to replace 1337 (2 packets) with the correct hex :

THE FLAG : ctf{2f0e53fae2572c358b82bdddf6d02b4a5315cc453d2d9a1df7914bdffe6e61aa}
