After opening the **pcap** file, we can see a bunch of FTP packets. I found out that there are 2 files if we export FTP objects : an archive and a password. You can simply decompress the archive to get the flag with the password in the file (I'm saying that because at first I thought we have to decrypt the password, but I was wrong)

THE FLAG :
DCTF{3907879c7744872694209e3ea9d2697508b7a0a464afddb2660de7ed0052d7a7}
