```
# Those are ICS Flags. Go to
"https://en.wikipedia.org/wiki/International_Code_of_Signals" and take each flag
and use its letter to decode the message. After a few research, I cannot find all
the flags there ( not all are valid ), so I got something like :
        # PICOCTF{F?AG?AND?TUFF}

# I was thinking and I used numbers instead of "?", because I saw a lot of numbers
in PicoCTFs flags. It was just a random thought and it worked

THE FLAG : PICOCTF{F1AG5AND5TUFF}
