# If we export the HTTP object at this **pcap** file, we can see a looooooot of files. After a little research for finding unique file, I found this 4 private logs at the end of the files and 2 were the same, so 3 unique private logs :

These files contain some keys that can decrypt TLS traffic. Go to Edit > Preferences > Protocols > TLS > (Pre)-Master-Secret log filename > privatelog(1).txt. Apply the modifiers. If we go again to export the HTTP objects, we export again the files and we will find the flag :

THE FLAG :
ECSC{6be66bc90994604d67eac1b05d16d0d682c7213fada57098283cc9dc895f4bfb}
